Kevin Brummer

Software Engineer
(Cloud & Data Platforms)

Location: Osaka, Japan
Phone: +81 070-4072-5974
E-mail: kevinjbrummer@gmail.com
Github: github.com/kevinjbrummer

INTRODUCTION

Software Engineer specializing in cloud-native and data platform systems, with 3+ years of experience building and operating event-driven architectures on AWS. Experienced in ETL pipelines, infrastructure optimization, and leading cross-functional, bilingual teams. On a cloud systems architect track, with a strong interest in designing large-scale platforms and managing larger engineering organizations. Based in Japan since 2018 with business-level Japanese (JLPT N1).

EMPLOYMENT HISTORY

Kasanare

Software Engineer
May2026 – Present

Metro Weather

Software Team Lead (8 Members)
May 2025 – April 2026

- Managed and optimized AWS infrastructure for production lidar and weather information, reducing monthly cloud costs through architectural and service-level improvements
- Created cloud system design documentation for lidar management and wind visualization platforms
- Represented the company at ASTM working group meetings alongside FAA and NASA stakeholders, contributing to emerging weather information standardization efforts
- Led a cross-functional team of software engineers and data scientists supporting American customers and delivering operational weather information products

Selected Projects

Deep Tech Startup Support Program (¥8M Government R&D Grant)

- Led development of a frontend visualization comparing proprietary LiDAR data with third-party weather observation devices
- Designed and implemented a data pipeline to ingest and process third-party weather data for internal validation and visualization
- Coordinated team execution to ensure on-time delivery under grant requirements

Enhance Weather Sensing Infrastructure for Urban Advanced Air Mobility Operations

- Collaborated with U.S.-based customers to deliver wind data collected from deployed devices in the United States
- Extended core ETL pipelines to support new data sources and delivery requirements
- Improved data ingestion performance to meet customer SLAs

Marine Sports Wind Data Visualization Platform

- Implemented 2D and 3D visualizations of wind direction and speed over water environments
- Conducted on-site demonstrations and troubleshooting with marine sports organizations

Software Engineer
November 2024 — May 2025

- Designed and implemented a scalable, event-driven ETL pipeline using AWS S3, EventBridge, and Lambda to process large volumes of weather data
- Migrated data processing and visualization workflows from local environments to cloud-based systems, significantly improving reporting speed and reliability

- Introduced CI/CD pipelines for AWS infrastructure and Lambda deployments, reducing manual errors and improving development velocity
- Built centralized error monitoring and alerting using CloudWatch Logs and SNS, integrating notifications with Slack and Microsoft Teams
- Developed frontend and backend web applications for a management console to monitor lidar devices, manage users, and visualize operational data

ANKH Systems
Software Developer
April 2022 — November 2024

- Developed and maintained RESTful APIs for third-party service integrations
- Improved AWS account security posture, reducing vulnerabilities and operational risk
- Deployed and operated applications on both cloud and on-premise rental servers
- Maintained and upgraded Linux-based production systems
- Refactored legacy codebases to improve reliability, scalability, and maintainability
- Introduced CI/CD pipelines, significantly reducing deployment time and errors
- Improved internal and external technical documentation

SKILLS

Architecture: Event-Driven Architecture, Domain-Driven Design, Serverless Architecture
Cloud Technologies: AWS, Microsoft Azure
Programming Languages: Python, Go, Ruby, TypeScript
Web Development: Vue, React, HTML/CSS, Test-Driven Development
DevOps & Tools: Docker, Git, GitHub, CI/CD
Soft Skills: Communication, Leadership, Problem Solving

CERTIFICATIONS

AWS Certified Developer - Associate
AWS Certified Solutions Architect - Associate
AWS Certified SysOps Administrator - Associate
AWS Certified Data Engineer - Associate
Microsoft Azure Fundamentals
JLPT N1

EDUCATION

Bachelor of Individualized Studies, University of Minnesota - Twin Cities, Minneapolis, MN
September 2015 — May 2018
Specialization in Computer Science, Communication Studies, and Japanese

LANGUAGES

English (Native)
Japanese (Business / JLPT N1)

VOLUNTEER

Coder Dojo Mentor
April 2024 — Present
